From dirt bikes and jet skis to weed wackers and snowblowers, machines powered by small gas engines have become a permanent—and loud—fixture in American culture. But fifty years of high-speed fun and pristine lawns

have not come without cost. In the first comprehensive history of the small-bore engine and the technology it powers, Paul R. Josephson explores the political, environmental, and public health issues surrounding one of America's most dangerous pastimes. Each chapter tells the story of an ecosystem within the United States and the devices that wreak havoc on it—personal watercraft (PWCs) on inland lakes and rivers; all-terrain vehicles (ATVs) in deserts and forests; lawn mowers and leaf blowers in suburbia. In addition to environmental impacts, Josephson discusses the development and promotion of these technologies, the legal and regulatory efforts made to improve their safety and environmental soundness, and the role of owners' clubs in encouraging responsible operation. Synthesizing information from medical journals, recent environmental research, nongovernmental organizations, and manufacturers, Josephson's compelling history leads to one irrefutable conclusion: these machines cannot be operated without loss of life and loss of habitat.

One of the most elusive and controversial figures in NASA's history, George W. S. Abbey was called "the Dark Lord," "the Godfather," and "UNO" (unidentified NASA official) by those within NASA. From young pilot and wannabe astronaut to engineer, bureaucrat, and finally director of the Johnson Space Center ("mission control"), Abbey's story has never been fully told—until now. This fascinating account takes readers inside NASA to learn the real story of how Abbey rose to power and wielded it out of the spotlight. Informed by countless hours of interviews with Abbey and his family, friends, adversaries, and former colleagues, *The Astronaut Maker* is the ultimate insider's account of ambition and power politics at NASA.

Photochemistry (a term that broadly speaking includes photophysics) is a branch of modern science that deals with the interaction of light with matter and lies at the crossroads of chemistry, physics, and biology. However, before being a branch of modern science, photochemistry was (and still is today), an extremely important natural phenomenon. When God said: "Let there be light", photochemistry began to operate, helping God to create the world as we now know it

t. It is likely that photochemistry was the spark for the origin of life on Earth and played a fundamental role in the evolution of life. Through the photosynthetic process that takes place in green plants, photochemistry is responsible for the maintenance of all living organisms. In the geological past photochemistry caused the accumulation of the deposits of coal, oil, and natural gas that we now use as fuels. Photochemistry is involved in the control of ozone in the stratosphere and in a great number of environmental processes that occur in the atmosphere, in the sea, and on the soil. Photochemistry is the essence of the process of vision and causes a variety of behavioral responses in living organisms. Photochemistry as a science is quite young; we only need to go back less than one century to find its early pioneer [1]. The concept of coordination compound is also relatively young; it was established in 1892, when Alfred Werner conceived his theory of metal complexes [2]. Since then, the terms coordination compound and metal complex have been used as synonyms, even if in the last 30 years, coordination chemistry has extended its scope to the binding of all kinds of substrates [3, 4].

The Golden Age of snowmobile manufacturing was from 1968-1976 with a gradual slow down leading to 1982. During this time literally hundreds of snowmobile manufacturers sprung up and then disappeared. The big names like Arctic Cat, Polaris, Ski-Doo, Yamaha, John Deere, Scorpion, Snow-Jet, Mercury, Rupp, Moto-Ski, to the many small-company brands like Allied, Boa Ski, Chaparral, Evinrude, Harley Davidson, Johnson, Polaron, Sears, Skiroule, Sno Prince, Viking, and even includes a

From the reviews of the Fourth Edition ...
"March has been uncompromising in his search for clarity and utility in presentations of a wide variety of essential organic chemistry. It remains an accessible and useful tool for both specialists and nonspecialists in the field. It does an excellent job both as a text for first-year graduate students and a handy reference for others."-Journal of Chemical Education
