Ras Al Khaimah Municipality launches Green Public Procurement to reduce environmental impact and bring economic benefits. Green Public Procurement (GPP) will drive adoption of sustainable procurement practices in the Government of Ras Al Khaimah and support the positioning of Ras Al Khaimah as a sustainable investment destination

Tourism is defined as the set of activities of persons traveling to and staying for the sake of rest, leisure, culture, health, etc., in places that are outside their usual environment for a period not exceeding one year. Ecotourism or green tourism is a form of sustainable tourism, focused on the discovery and preservation of nature and ecosystems. Ecotourism's main objective is to discover and preserve different forms of natural resources such as fascinating landscapes, local flora and fauna, while respecting ecosystems, even helping to restore, in a voluntary approach. This book examines the practices of ecotourism as well as its benefits and impacts on the environment.

This book offers conceptual and practical insights into the complex interactions between ecotourism and the natural environment, with consideration given to government policy, marketing by suppliers, consumer behaviour and visitor/environmental management. Illustrated by international case studies the roles of and interplay between tour operators, their clients, resource managers and local communities are examined. This creates a comprehensive and insightful overview of the factors that work for and against the achievement of environmental sustainability in and through ecotourism. The result is a critical examination of ecotourism and environmental sustainability that highlights ideas for best practice and proposes new directions for future research

'Ecotourism' outlines the phenomenon of Ecotourism; its sources and its development as a concept. Conservation issues are now at the forefront of public opinion - Nature is calling us to its wilds and we are responding in droves. The decline of natural rainforests, loss of endangered species, global warming and land degradation have galvanised public support for conservation. The interest in Ecotourism and nature-orientated tourism has coincided with this worldwide concern Using relevant case studies, 'Ecotourism' examines the potential positive social and environmental benefits of Ecotourism and is ideal for both students of tourism and practitioners within the tourism industry. 'Ecotourism' will also be of interest to environmental groups, land managers, academics and planners. Indeed anyone interested in examining what Ecotourism is and how it may hold the potential to solve or at least mitigate several of the great problems of our age. An example being arguably the greatest of these dilemmas: to satisfy human needs for employment, income and economic development, while at the same time protecting the environment. Stephen Wearing and John Neil are both lecturers at the School of Tourism Studies, University of Technology, Sydney, Australia.

Tourism is that area of activity of contemporary man that touches on various fields of human interest. Representatives of numerous academic disciplines find it intriguing for its exceptionally interdisciplinary character. Conditions for and consequences of the development of tourism are investigated, among others, by economists, geographers, sociologists, experts in culture, anthropologists, management and social policy specialists and even by representatives of some natural sciences. Researchers dealing with tourism need to meet strict methodological requirements, but they get access to a very interesting subject of scientific inquiry, which combines social, cultural, economic and environmental aspects to create an ontologically new quality offering epistemological challenges.

This publication, intended as a preparatory document for the World Ecotourism Summit in Quebec, 2002, reviews the current status and trends in ecotourism globally, the challenges ahead and the lessons learned in over 15 years of ecotourism development involving a broad range of stakeholders. The document incorporates comments and suggestions from recognized academics, NGO representatives and inter-governmental agencies such as WTO, IUCN and UNEP. It provides an overview of the history and current thinking on what constitutes ecotourism, what constitutes an ecotourism experience and considers the components of successful ecotourism. The author considers the roles of various stakeholders: industry, both in originating and destination countries, NGOs, communities, women, government, development agencies and researchers. The document ends with a useful list of resource documents and organizations.

The new fifth edition of Ecotourism focuses on an array of economic, social and ecological inconsistencies that continue to plague ecotourism in theory and practice, and examines the sector in reference to other related forms of tourism, impacts, conservation, sustainability, education and interpretation, policy and governance, and the ethical imperative of ecotourism as these apply to the world's greenest form of tourism. Building on the success of prior editions, the text has been revised throughout to incorporate recent research, including ecotourism taking place in under-represented world regions. It includes new case studies on important themes in research and practice as well as learning objectives in each chapter. David Fennell provides an authoritative and comprehensive review of the most important issues, including climate change and UN Sustainable Development Goals. Ecotourism continues to be embraced as the antithesis of mass tourism because of its promise of achieving sustainability through conservation mindedness, community development, education and learning, and the promotion of nature-based activities that are sensitive to both ecological and social systems. The book debates to what extent this promise has been realised. An essential reference for those interested in ecotourism, the book is accessible to students, but retains the depth required for use by researchers and practitioners in the field. This book will be of interest to students across a range of disciplines including geography, economics, business, ethics, biology, and environmental studies.

Genuine ecotourism can have many positive impacts, particularly the conservation of biodiversity and cultural heritage and the creation of economic opportunities for local communities. While promoting these, it aims to eliminate negative impacts such as environmental degradation, cultural commoditisation and playground effects. Unfortunately, the concept is broadly misunderstood and its true definition is widely debated. It is often used as a marketing tool, with some operators taking advantage of the ecotourism label to attract more business while behaving in environmentally irresponsible ways. This book considers the important topic of quality control and accreditation in ecotourism, describing the mechanisms that can be implemented to ensure quality in all aspects of the industry, namely protected areas, businesses, products and tour guides.

Currently in Tanzania, training institutions for professionals in cross-cutting sectors such as forestry and agriculture do not adequately capture the role of forest and tree resources for food security and nutrition, leading to dependency on one sector – agriculture – to cater for food and nutrition diversity. This undervalues the fundamental role of forest ecosystem services for sustainable agriculture by regulating water flows, stabilizing soils, maintaining soil fertility, regulating the climate, and providing habitat for wild pollinators and predators of agricultural pests. Provision of education on sustainable forests and trees for food security and nutrition at all levels seems to be the most conceivable entry point to ensure that adequate knowledge and skills are imparted to professionals. The goals of this training manual are to: enhance the recognition and significance of forestry to food security and nutrition through the sustainable management and use of forests and trees²; enhance the food security and nutrition benefits from the forests and trees; enhance and stimulate research and training capacity; strengthen institutional frameworks by incorporating food security and nutrition objectives in forest management policies, programmes and projects; and develop value chains based on forest and tree resources for sustainable development in the country. The overall objective is to create awareness and enable increased investment in the forestry sector for food security and nutrition in Tanzania. This training manual is also meant to serve as a useful tool for sharing and exchanging knowledge and experiences across different regions (within the country) and beyond.
