Since 1978, the 300th anniversary of Vivaldi's death, there has been an explosion of serious writing about his music, life and times. Much of this has taken the form of articles published in academic journals or conference proceedings, some of which are not easy to obtain. The twenty-two articles selected by Michael Talbot for this volume form a representative selection of the best writing on Vivaldi from the last 30 years, featuring such major figures in Vivaldi research as Reinhard Strohm, Paul Everett, Gastone Vio and Federico Maria Sardelli. Aspects covered include biography, Venetian cultural history, manuscript studies, genre studies and musical analysis. The intention is to serve as a 'first port of call' for those wishing to learn more about Vivaldi or to refresh their existing knowledge. An introduction by Michael Talbot reviews the state of Vivaldi scholarship past and present and comments on the significance of the articles.

The world's first book-length biography of Charles Vancouver Piper. It is current, well documented, and well illustration with an extensive subject and geographical index. With 62 photographs and illustrations. Free of charge in digital PDF format on Google Books.

H. Beam Piper is one of science fiction's most enigmatic writers. In 1946 Piper appeared seemingly from out of nowhere, already at the top of his form. He published a number of memorable short stories in the premier science fiction magazine of the time, *Astounding Science Fiction*, under legendary editor John W. Campbell. Piper quickly became friends with many of the top writers of the day, including Lester Del Rey, Fletcher Pratt, Robert Heinlein and L. Sprague de Camp. Piper also successfully made the turn from promising short story writer to major novelist, authoring *Four-Day Planet*, *Cosmic Computer*, *Lord Kalvan of Otherwhen* and *Little Fuzzy*, which was nominated for a Hugo award. Even those who counted Piper among their friends knew very little about the man or his life as a railroad yard bull in Altoona, Pennsylvania. This biography illuminates H. Beam Piper, both the writer and the man, and answers lingering questions about his death. Appendices include a number of Piper's personal papers, a complete bibliography of Piper's works, and an essay on Piper's *Terro-Human Future History* series.

It's not easy being the middle child, especially when your dad is a Navy Chief. Meet Piper Reed, a spunky nine-year-old who has moved more times than she can count on one hand. From Texas to Guam, wherever Piper goes, adventure follows, inspired by her active imagination, free-wheeling spirit, and a bit of sister magic. Unlike her older sister, Piper loves being part of a Navy family, and unlike her little sister, Piper is no prodigy genius. Piper is Piper—fearless and full of life. Based on her own childhood experience, Kimberly Willis Holt portrays the life of a Navy family with warmth and humor.

"In 1952, he put together an ensemble of engaging young singers and instrumentalists, who gave lively, expressive interpretations of medieval, Renaissance, and Baroque works. Their presentation of the liturgical drama *The Play of Daniel* won them international fame. Under Greenberg's leadership, they recorded extensively and toured Europe, the Soviet Union, and Latin America. At the height of his and *Pro Musica's* success, Noah Greenberg died at the age of 47. In *Pied Piper*, James Gollin not only relates Greenberg's tragically short, but highly colorful life story, but he sets the man in the rich context of America's rise to postwar political and cultural prominence."--Jacket.

Piper is an economically and ecologically important genus of plant that includes a fascinating array of species for studying natural history, natural products chemistry, community ecology, and evolutionary biology. The diversification of this taxon is unique and of great importance in understanding the evolution of plants. The diversity and ecological relevance of this genus makes it an obvious candidate for ecological and evolutionary studies, but surprisingly, most research on Piper spp. to-date has focused on the more economically important plants *P. nigrum* (black pepper), *P. methysticum* (kava), and *P. betle* (betel leaf). While this book does address the applied techniques of studying Piper, its focus is more on Piper in its natural setting. *Piper: A Model Genus for Studies of Phytochemistry, Ecology, and Evolution* synthesizes existing data and provides an outline for future investigations of the chemistry, ecology, and evolution of this taxon, while examining its key themes of Piper as a model genus for ecological and evolutionary studies, the important ecological roles of Piper species in lowland wet forests, and the evolution of distinctive Piper attributes. This volume has a place in the libraries of those studying or working in the fields of ecology, evolutionary biology, natural products chemistry, invasive species biology, pharmaceuticals, and ethnobotany.
