This book is renowned for being the book to own to understand lighting! This is better than all the other how to books on the market which just provide set examples for photographers to follow. Light Science and Magic provides photographers with a comprehensive theory of the nature and principles of light to allow individual photographers to use lighting to express their own creativity. It will show you in-depth how to light the most difficult subjects such as surfaces, metal, glass, liquids, extremes (black-on-black and white-on-white), and people. With more information specific for digital photographers, a brand new chapter on equipment, much more information on location lighting, and more on photographing people, you'll see why this is one of the only recommended books by www.strobist.com.

This text introduces a logical theory of photographers lighting - one that teaches beginning photographicis to predict results before setting up lights. This is not primarily a how-to book with only set examples for photographers to follow. Rather, it provides the reader with a comprehensive theory of the nature and principles of light to allow individual photographers to use lighting to express their own creativity. Numerous photographs and illustrations provide clear examples of the theories delineated within the text, while sidebars highlight special lighting questions.

Photographic lighting is a topic that will never go out of style, no matter how sophisticated cameras and other technology get. Even with the most high-tech gear, photographers still need to put a lot of thought and vision into lighting their photographs in order to get great results. Mastering this key skill has the power to dramatically and quickly improve your photographs as well as your efficiency. Light--Science and Magic provides you with a comprehensive theory of the nature and principles of light, with examples and instructions for practical application. Featuring photographs, diagrams, and step-by-step instructions, this book speaks to photographers of varying levels. It provides invaluable information on how to light the most difficult subjects, such as surfaces, metal, glass, liquids, extremes (black-on-black and white-on-white), and portraits. This new edition includes: - Expanded chapters on portraiture and lighting equipment - Chapters on necessary equipment when working on location versus in the studio - An updated appendix of reliable photo gear sources - Over 100 new photographs and informational sidebars - Updated information about advances in flash equipment, LED panels, and fluorescent lights Lighting styles will evolve, but the science of light will always remain the same. Once photographers understand the basic physics of lighting (without having to become physicists), they can apply that knowledge to a broad range of photographic styles.

This highly respected guide has been thoroughly updated and revised for content and design, and is now produced in full color. It introduces a logical theory of photographic lighting so new photographers can learn how to predict results before setting up lights.

This international bestseller provides photographers with a comprehensive theory of the nature and principles of light to allow individual photographers to use lighting to express their own creativity. It will show them how to light the most difficult subjects such as surfaces, metal, glass, liquids, extremes (black-on-black and white-on-white), and people.

Photographic lighting is a topic that will never go out of style, no matter how sophisticated cameras and other technology get. Even with the most high-tech gear, photographers still need to put a lot of thought and vision into lighting their photographs in order to get great results. This key skill has the power to dramatically and quickly improve photographs. Light Science and Magic provides you with a comprehensive theory of the nature and principles of light, with examples and instructions for practical application. Featuring photographs, diagrams, and step-by-step instructions, this book speaks to photographers of varying levels. It provides invaluable information on how to light the most difficult subjects, such as surfaces, metal, glass, liquids, extremes (black-on-black and white-on-white), and portraits. This new edition includes: All new chapter titled "Setting Up Your New Studio" A re-vamped and expanded chapter 8 now titled "Making Portraits" New appendix of reliable photo gear sources Over 100 new photographs and informational sidebars Updated information about advances in flash equipment, LED panels and fluorescent lights Styles of lighting continue to change, but the nature of light will always remain the same. Once photographers understand the basic physics of lighting, they can apply that knowledge to a broad range of photographic styles.

Have you ever wondered if you need to use a flash in sunlight? What the best lighting is for a macro shot? How long your exposure should be in low lighting? If you have, this book is for you! Lighting affects composition, focus, exposure decisions, and pretty much everything about taking a picture. Further, the mood of the photograph is totally dependent on the lighting - and can make or break the image. It is also one of the hardest things for a budding photographer to grasp. The existing lighting books tend to require expensive equipment and extensive knowledge on how to light photos. For those who aren't at that level yet, this guide shows how to take shots in certain settings and times, such as lighting for specific seasons, back-lighting, water lighting, available light at mid-day, and more. Loaded with photos, tips, tricks, and inspiration, you can't help but walk away from this book with the critical knowledge you need to know to take the perfect picture.

Softboxes'specialized photographic lighting devices that produce a flattering and soft, low-contrast looki,are the main focus of this resource for photographers. Professional and amateur photographers alike will be able to apply the thorough explanations on the simple, yet highly effective, light- and shadow-altering methodologies found in this guidebook to any subject matter in portrait, fashion, and editorial images. Additional chapters cover the use of softboxes in partnership with other light sources, including sunlight and various types of studio lighting treatments.

Randall Styers seeks to account for the vitality of scholarly discourse purporting to define and explain magic despite its failure to do just that. He argues that it can best be explained in light of the European and Euro-American drive to establish and secure their own identity as normative.

In *Steering by Starlight*, renowned life coach Martha Beck, Ph.D., describes the step-by-step process she uses with her private clients to help them navigate the terrain of their best lives. Bringing together cutting-edge research in psychiatry, neurology, and related fields in an accessible, substantive, original way, Dr. Beck offers powerful methods for solving the problems that beset ordinary people. Using her trademark wisdom, empathy, and engaging style, she connects you with proven, effective strategies that have worked for the hundreds of people she has coached. For those who have found your North Stars, this book will be an invaluable tool to stay the course and overcome obstacles. For those who still feel adrift, it will provide a way to find true North and follow the path of best destiny. Dr. Beck identifies three stages along the path to recapturing a satisfying life: ▯ "The Stargazer" helps you understand why it is so easy to lose yourself and offers strategies for sighting your North Star ▯ "The Mapmaker" uses this newly clarified perspective to evaluate your situation and plot a course for upcoming years ▯ "The Pathfinder" discusses the adventures that may be encountered as you travel along this new life course Whether you are seeking better relationships, a more focused career direction, a more harmonious lifestyle, or the achievement of specific fitness goals, the colorful anecdotes, case studies, and exercises in *Steering by Starlight* will point the way.
