Updated for its Second Edition, this question-and-answer review book offers a concise review of ophthalmology. It combines a review of basic ophthalmology with real-life clinical cases and multiple-choice questions with answers and explanations. More than 400 clinical photographs, fluorescein angiograms, and CT, MRI, and ultrasound images help readers master this visually oriented specialty. This edition has over 100 new full-color illustrations. Focusing on common diseases, the book covers all specialty rotations, plus key areas such as embryology, anatomy, pediatrics, plastics, and lenses. This edition includes new cases and information on new drugs, especially glaucoma drugs.

So what's so special about doctors and their families? Many doctors feel that they are expected to give too much of their time to a medical career to the detriment of their family and their personal lives. This book is a practical guide to provide support and ideas on how to cope with stresses directly suffered or passed on from a relative or spouse. Written in a clear and practical style using information collated from family members describing their feelings about having a doctor in the family it provides unique and vital information on how to minimise the effects of having a medical career on the family. Essential reading for doctors and their families.

This book presents 300 multiple choice questions covering the range of subjects trainee ophthalmologists need to know. The first third of the questions test students' understanding of the basic sciences; the remainder cover the clinical areas and present problems relating to anatomical sites. Included are groups of questions on glaucoma, motility, neuro-

File Type PDF Mcq Ophthalmology

ophthalmology and systemic disease.

This series of multiple choice questions is based on the textbook *Common Eye Diseases And Their Management* (1985), also from Springer-Verlag. The questions have been grouped to fit in with the chapter headings in the latter. Many of the questions are supported by expanded answers but further information should be sought in the textbook. The format of the questions has been arranged so that the number of true or false answers varies and we have taken pains to eliminate the ambiguities which tend to creep into multiple choice question papers. In compiling these questions, we have attempted to incorporate a number of key facts and it will be seen that these have occasionally been repeated for emphasis. A surprisingly large amount of information is contained in questions and answers, and simply reading through both can be a useful learning experience in itself. The questions have been aimed at the medical student level but it is hoped that they may be of some value to general practitioners outside ophthalmology and perhaps also to postgraduates. The computerised Kuder-Richardson reliability index, which measures the consistency of a student's performance, has shown these questions to be reliable in assessing a student's knowledge. A sample of these questions has been tested in another medical school and we understand that students' marks there equate well with the results from essay questions.

Discusses organ

This aid for revision and continuing professional development contains multiple choice questions and full explanatory answers to assist learning. It covers all subspecialities, including refractive surgery, and is formatted

to prepare the reader for the final MRCOphth/MRCS exam.

Multiple Choice Questions in Ophthalmic and Neuroanatomy was written from notes that made by the author while preparing for the College of Ophthalmologists' primary examination. At the time it was difficult to gauge the standard expected as there were no questions available. This book aims to help many candidates who need to learn this sort of anatomy and hopes that its appeal extends beyond budding ophthalmologists and general surgeons to include optometrists and orthoptists. The questions deal with the following topics: osteology; anatomy of the head and neck; vascular anatomy; neuroanatomy; orbital and autonomic anatomy; ocular adnexae and extraocular muscles; cranial nerves and visual pathway; ocular anatomy; and embryology.

This new edition provides ophthalmologists and trainees with the latest information and advances in their field. Presented in question and answer format, the book begins with discussion on optics and refraction, followed by genetics and embryology. The next chapters cover the diagnosis and management of disorders in different parts of the eye. The third edition has been fully revised and updated, and new topics added. Authored by a recognised team of experts led by Prof Myron Yanoff from Drexel University College of Medicine, Philadelphia, the text is further enhanced by clinical photographs and illustrations. Key points Comprehensive review of latest advances in diagnosis and management of ophthalmic disorders and diseases Presented in question and answer format, fully revised third edition with new topics added Internationally recognised author and editor team Previous edition (9789350255766) published in 2012

Approach your exams with confidence using Review Questions in Ophthalmology, Third Edition. You ' ll find a concise review of all specialty rotations in ophthalmology, plus key areas such as embryology, anatomy, pediatrics, plastics, and lenses. Real-life clinical cases and more than 1,000 multiple choice questions with answers and explanations in this comprehensive review of ophthalmology provide core knowledge for all residents and fellows in ophthalmology, preparing you for success – both on your exams and in your practice! Test yourself with 1,000+ multiple choice questions, including answers and explanations. Clearly visualize what you ' re likely to see on exams and in practice, thanks to more than 400 clinical photographs, fluorescein angiograms, and CT, MRI, and ultrasound images. Focus on common diseases for more useful self-assessment and real-life clinical preparation.

A sound knowledge of basic sciences is vital for any doctor with an interest in ophthalmology, and is a significant part of all postgraduate examinations in the subject. Featuring 640 multiple choice questions, this is a comprehensive revision guide for candidates taking the basic sciences component of the FRCOphth and ICO examinations. It is highly recommended for ophthalmologists of all grades, ranging from juniors completing ICO basic sciences and FRCOphth examinations to seniors wishing to refresh their knowledge and revalidate. This book is divided into relevant chapters with topics that follow logically, offering a thorough approach to revision and exam practice. Each chapter includes questions in both the FRCOphth (SBA) and ICO (true or false) formats. Detailed, referenced answers are provided to aid comprehension, with difficulty levels allocated for each question to gauge personal progress.
