This book explores the foundations of the intellectual renaissance in tenth-century England, including both the English Benedictine reform and the establishment by Æthelwold, Bishop of Winchester (963–84), of the most influential school in late Anglo-Saxon England. The vital early stages of Æthelwold's scholarly career are explored for the first time, particularly his formative years in King Æthelstan's entourage and his period of study at Glastonbury. Light is shed on the contribution which Æthelstan's cosmopolitan court made to intellectual and spiritual life. Based on a wide range of

evidence Dr Gretsch assigns to Æthelwold two influential texts: an interlinear translation of the psalter and a vast corpus of Old English glosses to Aldhelm's prose *De virginitate*. These glosses are shown to have played a pivotal role in the development of the vernacular as a medium for scholarly discourse.

This volume contributes a wider approach to word formation processes and sheds light on some unsolved issues. While the formal relationships established between the different constituents of a complex word have been analyzed in great depth, the semantic links have received little dedication. In order to complete the analysis, it is necessary to pay attention to the semantic properties associated to verbalization. The main purpose of the book is to integrate both the semantic proposals and the formal perspectives concerning word formation. This theoretical aim becomes the framework to study several mechanisms of lexical creation and neologisms. Furthermore, word formation is presented as a new source for Applied Linguistics. Although the volume uses Spanish as a starting point, it means to delimit formation patterns which may also be productive in other languages. This book is sure to become
