Einstein's Special Theory of Relativity has virtually proved that we all live forever in some kind of timeless state. Quantum observation, a consequence of quantum physics, has provided us with strong evidence that the true God is He of the Bible. Augustine of Hippo said that he probably would never have been converted were it not for Plato.

Quantum physics shows us that time is relative and only exists as a human concept. Consequently, eternity too must reside outside of time. To say our soul lives on for eternity is meaningless. Eternity and time do not exist as measurements at the quantum level.

In the final part of this series, we'll consider Einstein's Relativity, and finally put to rest one of the oldest controversies in the Bible (but you'll have to wait until the end). Relativity. What is relativity? Simply stated, time and events are not absolute, they can only be interpreted from a specific point of view. For example, suppose you watched a lightning storm from your window, and you see two lightning strikes hit different points on the ground at the same time.

Quantum theory and the theory of relativity fail in this almost infinitely dense and hot primal state of the universe. Only an all-encompassing theory of quantum gravity which unifies these two fundamental pillars of physics could provide an insight into how the universe began.

To start with the obvious: philosophy of physics is the part of philosophy of science that deals with the physical sciences. While this is a highly specialized area in philosophy, it is a very broad and diverse field in and of itself. Works in philosophy

But in the last century, it has been usurped as a description of the universe by newer theories: relativity and quantum mechanics. These two pillars of modern physics supersede Newtonian physics in ways which are important to this debate. And which might save us from the paralyzing effects of the questions above. Relativity

This revolution came in the form of two new theoretical paradigms, both of which seemed at odds with the worldview of classical physics: the theory of relativity developed by Albert Einstein (1879 – 1955) and the theory of atomic behavior called quantum theory developed by a host of scientists in the 1920s. New views of space, time, and ...
