In order to create these end products, the ceramic matter needs to go through the traditional manufacturing process which goes as follows: Step #1: Milling & Raw Material Procurement - The raw materials used in the process are milled materials typically found in mining sites that have been reduced from a large size to smaller sizes or even in some cases, pulverized depending upon the end product.

At a time when the importance of ceramics in modern products has advanced rapidly, James S. Reed's Principles of Ceramics Processing fulfills the need for a clearly written, comprehensive introduction to the field. This single text gives materials science engineers and students in ceramics engineering an understanding of the scientific principles and technology of ceramics processing as it applies to the development and production of new advanced ceramics.
