The study was conducted to determine if there is predictive power between students' Scholastic Reading Inventory (SRI) lexile score and their MAP score at the end of the year. The SRI lexile and MAP scale scores from the 2012-2013 school year were analyzed for the third grade cohort. Each of the 56 third grade students' SRI lexile was compared to their MAP scale score at the end of the year. The data was analyzed through different statistical analyses, and through reviewing of literature and research regarding assessment and reading instruction. It was found that the MAP scale scores can be predicted from SRI lexiles. Therefore, teachers should be form instruction based on this reading achievement.

In December of 1938, a chemist in a German laboratory made a shocking discovery: When placed next to radioactive material, a Uranium atom split in two. That simple discovery launched a scientific race that spanned 3 continents. In Great Britain and the United States, Soviet spies worked their way into the scientific community; in Norway, a commando force slipped behind enemy lines to attack German heavy-water manufacturing; and deep in the desert, one brilliant group of scientists was hidden away at a remote site at Los Alamos. This is the story of the plotting, the risk-taking, the deceit, and genius that created the world's most formidable weapon. This is the story of the atomic bomb. Bomb is a 2012 National Book Awards finalist for Young People's Literature. Bomb is a 2012 Washington Post Best Kids Books of the Year title. Bomb is a 2013 Newbery Honor book.

The purpose of this study was to examine an effect of read-alouds on the reading achievement of middle grade students in a core intensive reading program

in the School District of Palm Beach County, the fourth largest school district in Florida. This was accomplished conducting literature studies through read-alouds and sustained silent reading with sixth-, seventh-, and eighth-grade intensive reading students as a supplement to the READ XL® remedial program. Specifically, this study investigated the difference on the achievement scores on the Florida State Fluency Probes (FORF), the Florida Comprehensive Achievement Test in Reading (FCAT), the Florida Comprehensive Norm Reference Test Scale Scores (FCAT/NRT), the Scholastic Reading Inventory Lexile Levels (SRI), and the teacher created tests on the literature during the period 2006-2007. The study further examined the interaction of both grade level and gender with the readaloud strategy and sustained silent reading. A Factorial ANOV A (analysis of variance) was used to test the effect of each of the treatments, read-alouds and sustained silent reading, on the dependent variables, FORF, the FCAT, the FCAT/NRT, the Scholastic Reading Inventory Lexile Levels, and the teacher created tests and the interactions with grade level and gender. Results indicated a greater increase in fluency, as measured by the Florida State Fluency Probes, from 2006 to 2007, for students in the read-aloud group (test) as compared with students in the sustained silent reading group (control group), and for students in grades 6 and 7 as compared with students in grade 8. Overall there was no difference in fluency as moderated by gender. The results of this study also found that read-alouds promoted increased performance of female students on the teacher-created tests. This suggests that readalouds may play a role in increasing the performance of middle school at-risk female readers on similar instruments.
