Relativity is a term that can make many things work. If a planet is 100 million light years away we assume that light takes 100 million years to get from that planet to earth. Einstein said that at the speed of light time stands still so from the light's view, it would take zero time to get here!

The theory of relativity usually encompasses two interrelated theories by Albert Einstein: special relativity and general relativity. Special relativity applies to all physical phenomena in the absence of gravity. General relativity explains the law of gravitation and its relation to other forces of nature. It applies to the cosmological and astrophysical realm, including astronomy. The theory transformed theoretical physics and astronomy during the 20th century, superseding a 200-year-old theory
